DESIGN AND ANALYSIS OF ALGORITHMS

Subject Code: CS501PC

Regulations: R16 - JNTUH

Class: III Year B.Tech CSE I Semester

Department of Computer Science and Engineering BHARAT INSTITUTE OF ENGINEERING AND TECHNOLOGY

Ibrahimpatnam - 501 510, Hyderabad

DESIGN AND ANALYSIS OF ALGORITHMS (CS501PC) COURSE PLANNER

I. COURSE OVERVIEW:

Introduction to fundamental techniques for designing and analyzing algorithms, including asymptotic analysis; divide-and-conquer algorithms and disjoint set operations; graph algorithms; backtracking algorithms; greedy algorithms; dynamic programming; and branch and bound algorithms; NP-Hard and NP-Complete **problems**;

II. PREREQUISITE(S):

- 1. Problem Solving Skills
- 2. Basic Programming
- 3. Data Structures
- 4. Formal Languages and Automata Theory

III. COURSE OBJECTIVES:

1	To analyze performance of algorithms.
2	To choose the appropriate data structure and algorithm design method for a specified
	application.
3	To understand how the choice of data structures and algorithm design methods
	impacts the performance of programs.
4	To solve problems using algorithm design methods such as the greedy method, divide
	and conquer, dynamic programming, backtracking and branch and bound.
5	To understand the differences between tractable and intractable problems.
6	To introduce P and NP classes.

IV. COURSE OUTCOMES:

S.No	Description	Bloom's Taxonomy Level
1	Ability to analyze the performance of algorithms.	Analyze (level 4)
2	Ability to choose appropriate algorithm design	Knowledge, Application
	techniques for solving problems.	(level 1, level 3)
3	Ability to understand how the choice of data	Understanding, Synthesis
	structures and the algorithm design methods impact	(Level 2, level 5)
	the performance of programs.	

V. HOW PROGRAM OUTCOMES ARE ASSESSED:

	Program	Level	Proficiency
	Outcomes (PO)		assessed by
PO1	Engineering knowledge: Apply the knowledge of		
	mathematics, science, engineering fundamentals, and	3	Assignments
	an engineering specialization to the solution of		
	complex engineering problems related to Computer		
	Science and Engineering.		
PO2	Problem analysis : Identify, formulate, review research		
	literature, and analyze complex engineering problems	3	Assignments
	related to Computer Science and Engineering and		
	reaching substantiated conclusions using first		
	principles of mathematics, natural sciences, and		
	engineering sciences.		
PO3	Design/development of solutions : Design solutions for		
	complex engineering problems related to Computer		
	Science and Engineering and design system	2	Assignments
	components or processes that meet the specified needs		_
	with appropriate consideration for the public health and		

	safety, and the cultural, societal, and environmental considerations.		
PO4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.	2	Assignments
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.		
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the Computer Science and Engineering professional engineering practice.	1	Assignments
PO7	Environment and sustainability : Understand the impact of the Computer Science and Engineering professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.	-	
PO8	Ethics : Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.	-	
PO9	Individual and team work : Function effectively as an individual, and as a member or leader in diverse teams, and in ultidisciplinary settings.	-	
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.	-	
PO11	Project management and finance : Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.	-	
PO12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. 2: Moderate 3: Substantian (1997)	2	Research

1: Slight (Low) 2: Moderate 3: Substantial -: None (Medium) (High)

	Program Specific Outcomes (PSO)	Level	Proficiency assessed by
PSO1	Foundation of mathematical concepts: To use mathematical methodologies to crack problem using suitable mathematical analysis, data structure and suitable algorithm.		Lectures, Assignments
PSO2	Foundation of Computer System: The ability to interpret the fundamental concepts and methodology of computer systems. Students can understand the functionality of hardware and software aspects of computer systems.		Lectures, Assignments
PSO3	Foundations of Software development: The ability to grasp the software development lifecycle and methodologies of software systems. Possess competent skills and knowledge of software design process. Familiarity and practical proficiency with a broad area of programming concepts and provide new ideas and innovations towards research.		

VII. SYLLABUS:

UNIT- I

Introduction-Algorithm definition, Algorithm Specification, Performance Analysis-Space complexity, Time complexity, Randomized Algorithms. **Divide and conquer**- General method, applications - Binary search, Merge sort, Quick sort, Strassen's Matrix Multiplication.

UNIT-II

Disjoint set operations, union and find algorithms, AND/OR graphs, Connected Components and Spanning trees, Bi-connected components **Backtracking**-General method, applications-The 8-queen problem, sum of subsets problem, graph coloring, Hamiltonian cycles.

UNIT-

Ш

Greedy method- General method, applications- Knapsack problem, Job sequencing with deadlines, Minimum cost spanning trees, Single source shortest path problem.

UNIT- IV

Dynamic Programming- General Method, applications- Chained matrix multiplication, All pairs shortest path problem, Optimal binary search trees, 0/1 knapsack problem, Reliability design, Traveling sales person problem.

UNIT- V

Branch and Bound- General Method, applications-0/1 Knapsack problem, LC Branch and Bound solution, FIFO Branch and Bound solution, Traveling sales person problem.

NP-Hard and NP-Complete problems- Basic concepts, Non-deterministic algorithms, NP - Hard and NP- Complete classes, Cook's theorem.

SUGGESTED BOOKS:

TEXT BOOKS:

- 1. Fundamentals of Computer Algorithms, 2nd Edition, Ellis Horowitz, Sartaj Sahni and
- S. Rajasekharan, Universities Press.
- 2. Design and Analysis of Algorithms, P. H. Dave, H.B.Dave, 2nd edition, Pearson Education.

REFERENCE BOOKS:

- 1. Algorithm Design: Foundations, Analysis and Internet examples, M. T. Goodrich and R. Tomassia, John Wiley and sons.
- 2. Design and Analysis of Algorithms, S. Sridhar, Oxford Univ. Press
- 3. Design and Analysis of algorithms, Aho, Ullman and Hopcroft, Pearson Education.

- 4. Foundations of Algorithms,, R. Neapolitan and K. Naimipour, 4th edition, Jones an Bartlett Student edition.
- 5. Introduction to Algorithms,3rd Edition, T. H. Cormen, C. E.Leiserson, R. L. Rivest, and C. Stein, PHI

NPTEL Web Course:

- 1. <u>http://nptel.ac.in/courses/106101060/</u>
- 2. tps://onlinecourses.nptel.ac.in/noc16_cs04/preview

NPTEL Video Course:

1. http://www.nptelvideos.in/2012/11/design-analysis-of-algorithms.html

GATE SYLLABUS:

Searching, sorting, hashing. Asymptotic worst case time and space complexity. Algorithm design techniques: greedy, dynamic programming and divide-and-conquer. Graph search, minimum spanning trees, and shortest paths.

IES SYLLABUS:

Not Applicable

VIII. COURSE PLAN:

22	_	graph coloring,	by using	
23	6	Hamiltonian cycles	Backtracking	
24		BRIDGE CLASS -2	Assess the student	
			skills.	
	1	UNIT-III		T
25			Describe the	
25		Greedy method- General method,	concept of	
26	7		Greedy method.	
26		applications- Knapsack problem,	Apply the	
27	-		Concept of	
28		Tab as an an aire a with deadlines	Greedy method to solve the real	
29		Job sequencing with deadlines,	world problems.	
30	1	Mock Test-1	world problems.	1
30	8	1st MID EXAMS		1
31	-	1 WID EXAMS	A 4h	
32	1	Minimum cost spanning troos	Apply the	
33		Minimum cost spanning trees,	Concept of Greedy method to	
34	_		solve the real	
35	9	Single source shortest path problem.	world problems.	
33	-		Assess the student	
36		BRIDGE CLASS-3	skills.	
		UNIT-IV	SKIIIS.	
		Dynamic Programming- General	Understand the	
		Method,	Dynamic	
37		applications- Chained matrix	Programming	
		multiplication,	techniques.	
	10	All pairs shortest path problem,	teeninques.	
38		An pan's shortest path problem,		
39	1	Optimal binary search trees,	Demonstrate the	1
40	_	Optimal omaly scarcii nees,		
41		— 0/1 knapsack problem,	Dynamic	
41	-		programming techniques.	
	11	Reliabil0ity design,	techniques.	
43	-	Trovaling sales marson much large		
44		Traveling sales person problem.		

	UNIT-V						
45		Branch and Bound- General Method,	State the purpose of Branch and Bound				
46	12	applications-0/1 Knapsack problem,	Solve the real				
47	12	LC Branch and Bound solution, FIFO Branch and Bound solution,	world problems by using Branch and Bound.				
48		Traveling sales person problem.					
49		NP-Hard and NP-Complete problems- Basic concepts,	Distinguish the concept of NP-Hard and NP-Complete Problems.	1			
50	13	Non-deterministic algorithms,	Discuss the concept of Non-deterministic algorithms				
51		NP - Hard and NP- Complete classes, Cook's theorem	Distinguish the concept of NP-Hard and NP-Complete Problems.				
52		BRIDGE CLASS-4	Assess the student skills.				
53			Revise the				
54		REVISION	concepts of all units				
55	14		Discuss the				
56		PREVIOUS PAPER DISCUSSION	questions from previous year question papers

X. QUESTION BANK: (JNTUH)

J.	Question	Blooms	Program
NO	Question	Taxon	Outc

		omy Level	ome						
U	UNIT – I								
PA	ART – A (SHORT ANSWER QUESTIONS)								
1	Define the term algorithm and state the criteria the algorithm should satisfy.	Knowledge	1						
2	Compute the average case time complexity of quick sort	Apply	7						
3	Describe the role of space complexity and time complexity of a program?	Knowledge	1						
4	If $f(n)=5n^2+6n+4$, then prove that $f(n)$ is $O(n^2)$	Apply	3						
5	What is meant by divide and conquer? Give the recurrence relation for divide and conquer.	Understand	7						
PA	ART – B (LONGANSWER QUESTIONS)								
1	Write binary search algorithm and analyze its time complexity	Understand	7						
2	Explain quick sort algorithm and simulate it for the following data 20, 5,10,16,54,21	Apply	7						
3	Illustrate merge sort algorithm and discuss time complexity	Understand	7						
4	Describe strassen's matrix multiplication.	Understand	7						
5	Sort the list of numbers using merge sort: 78, 32, 42, 62, 98, 12, 34, 83	Apply	7						

S. No	Question	Blooms Taxonomy Level	Program Outcome
UNI	T – II		
PAR	T – A (SHORT ANSWER QUESTIONS)		
1	Discuss about union operation on sets	Knowledge	5
2	Describe AND/OR graph	Understand	5
3	Explain game tree	Understand	5
4	Define a connected and bi-connected component.	Knowledge	5
5	Define an articulation point?	Knowledge	5
PAR	T – B (LONGANSWER QUESTIONS)		
1	Discuss various tree traversal techniques with examples	Understand	5
2	Discuss about weighting rule for finding UNION of sets and collapsing rule	Understand	5
2	Differentiate divide and conquer and greedy		
3	method	Understand	6,7
4	Discuss game trees	Understand	5
5	Compare and contrast BFS and DFS.	nalyze	5

No	Question	Blooms Taxon omy Level	Program Outc ome
UNIT – III			
PART – A (SHORT ANSWER QUESTIONS)			
1	Define greedy method	Know edge	8
2	State Prim;s algorithm	Knowledge	8

3	What is job sequencing with deadlines problem	Know edge	8
4	State the principle of optimality	Know edge	8
5	Define minimum cost spanning tree	Know edge	8
PART – B (LONGANSWER QUESTIONS)			
1	Discuss single source shortest path problem with example	Apply	8
2	Discuss kruskals algorithm with an example	Understand	8
3	Write an algorithm knapsack problem .Give example	Apply	8
4	Explain prims algorithm with an example	Understand	8
	Compute the optimal solution for knapsack problem using		
5	greedy method N=3,		
	M=20, $(p1,p2,p3)=(25,24,15)$, $(w1,w2,w3)=(18,15,10)$	Apply	8

		Blooms	Program
Vo	Question	Taxonomy	Outc
		Level	ome
Ul	NIT – IV		
PA	ART – A (SHORT ANSWER QUESTIONS)		
1	Write an algorithm for optimal binary search tree Give		
1	example	Apply	8
2	Explain 0/1 knapsack problem with example	Understand	8
3	Discuss all pairs shortest path problem with an example	Understand	8
4	Explain 8 – Queens		
4	problem	Understand 1	10
5	Define Sum of Subsets problem	Understand 1	10
PART – B (LONGANSWER QUESTIONS)			
1	Describe the travelling salesman problem and discuss		
1	how to solve it using dynamic programming?	Understand	9
2	Explain the concept Chained matrix multiplication.	Apply	8
	Solve the solution for 0/1 knapsack problem using		
3	dynamic programming $(p1,p2,p3,p4) = (11, 21, 31,$		
3	33), $(w1, w2, w3, w4) = (2, 11, 22, 15), M=40, n=4$		
		Apply	8
4	Use optimal binary search tree algorithm and compute		
	wij, cij, rij, 0<=i<=j<=4,p1=1/10, p2=1/5, p3=1/10,		
	p4=1/120, q0=1/5, q1=1/10, q2=1/5, q3=1/20,q4=1/20.		
		Apply	8
5	Discuss all pairs shortest path problem with an example	Understand	8

UNIT – V			
PART – A (SHORT ANSWER QUESTIONS)			
1	Define a dead node	Knowledge	10
2	Differentiate live node and dead node Knowledge 10		10
3	Compare NP-hard and NP-completeness Knowledge 10		10
4	Define deterministic problem	Understand	12
5	Define maxclique problem? Understand 12		12

PART – B (LONGANSWER QUESTIONS)				
1	Explain the principle of FIFO branch and bound	Apply	11	
2	Explain the method of reduction to solve travelling sales			
4	person problem using branch and bound	Apply	11	
3	Write non deterministic algorithm for sorting and searching	Understand		12
_	What is chromatic number decision problem and clique			
3	decision problem	Apply	12	

XI. OBJECTIVE QUESTIONS: JNTUH

UNIT-I

- 1. In analysis of algorithm, approximate relationship between the size of the job and the amount of work required to do is expressed by using ______
- (a) Central tendency (b) Differential equation (c) Order of execution (d) Order of magnitude (e) Order of Storage.

Ans :Order of execution

- 2. Worst case efficiency of binary search is
- (a) $\log 2 n + 1$ (b) n (c) N2 (d) 2n (e) $\log n$.

Ans: log2 n + 1

3. For analyzing an algorithm, which is better computing time?

(a)O (100 Log N) (b) O (N) (c)O (2N) (d) O (N logN) (e) O (N2).

Ans :O (100 Log N)

- 4. Consider the usual algorithm for determining whether a sequence of parentheses is balanced. What is the maximum number of parentheses that will appear on the stack AT ANY ONE TIME when the algorithm analyzes: (()(())(()))
- (a) 1 (b)2 (c)3 (d) 4

Ans :3

- 5. Breadth first search
- (a) Scans each incident node along with its children. (b) Scans all incident edges before moving to other node. (c) Issame as backtracking (d) Scans all the nodes in random order.

Ans: Scans all incident edges before moving to other node.

- 6. Which method of traversal does not use stack to hold nodes that are waiting to be processed?
- (a) Dept First (b) D-search (c)Breadth first (d) Back-tracking

Ans: Breadth first

- 7. The Knapsack problem where the objective function is to minimize the profit is_____
- (a) Greedy (b) Dynamic 0 / 1 (c) Back tracking (d) Branch & Bound 0/1

Ans: Branch & Bound 0/1

- 8. Choose the correct answer for the following statements:
- I. The theory of NP-completeness provides a method of obtaining a polynomial time for NPalgorithms.
- II. All NP-complete problem are NP-Hard.
- (a) I is FALSE and II is TRUE (b) I is TRUE and II is FALSE (c) Both are TRUE (d) Both are FALSE

Ans: I is FALSE and II is TRUE

- 9. If all c(i, j)'s and r(i, j)'s are calculated, then OBST algorithm in worst case takes one of the following time.
- (a) O(n log n) (b) O(n3) (c) O(n2) (d) O(log n) (e) O(n4).

Ans: O(n3)

- 10. The upper bound on the time complexity of the nondeterministic sorting algorithm is
- (a) O(n) (b) O(n log n) (c) O(1) (d) O(log n) (e) O(n2).

Ans: O(n)

11. The worst case time complexity of the nondeterministic dynamic knapsack algorithm is (a) $O(n \log n)$ (b) $O(\log n)$ (c) O(n2) (d) O(n) (e) O(1).

Ans :O(n)

- 12. Recursive algorithms are based on
- (a) Divideand conquer approach (b) Top-down approach (c) Bottom-up approach (d) Hierarchical approach

Ans: Bottom-up approach

- 13. What do you call the selected keys in the quick sort method?
- (a) Outer key (b)Inner Key (c) Partition key(d) Pivot key (e) Recombine key.

Ans:c

- 14. How do you determine the cost of a spanning tree?
- (a) By the sum of the costs of the edges of the tree (b) By the sum of the costs of the edges and vertices of the tree
- (c) By the sum of the costs of the vertices of the tree (d) By the sum of the costs of the edges of the graph
- (e) By the sum of the costs of the edges and vertices of the graph.

Ans: By the sum of the costs of the edges of the tree8.

- 15. The time complexity of the normal quick sort, randomized quick sort algorithms in the worst case is
- (a) O(n2), $O(n \log n)$ (b) O(n2), O(n2) (c) $O(n \log n)$, O(n2) (d) $O(n \log n)$, $O(n \log n)$ (e) $O(n \log n)$, $O(n2 \log n)$.

Ans :O(n2), O(n2)

- 16. Let there be an array of length 'N', and the selection sort algorithm is used to sort it, how many times a swap function is called to complete the execution?
- (a) N log N times (b) log N times (c) N2 times (d) N-1 times (e) N times.

Ans: N-1 times

- 17. The Sorting methodwhich is used for external sort is
- (a) Bubble sort (b) Quick sort (c) Merge sort (d) Radix sort (e) Selection sort.

Ans: Radix sort

- 18. The graph colouring algorithm's time can be bounded by
- (a) O(mnm) (b) O(nm) (c) O(nm. 2n) (d) O(nmn).

Ans :O(nmn).

- 19. Sorting is not possible by using which of the following methods?
- (a) Insertion (b) Selection (c) Deletion (d) Exchange

Ans: Deletion

- 20. What is the type of the algorithm used in solving the 8 Queens problem?
- (a)Backtracking (b) Dynamic (c) Branch and Bound (d) DandC

Ans: Backtracking

UNIT-II

- 1. Name the node which has been generated but none of its children nodes have been generated in state space tree of backtracking method.
- (a) Dead node (b) Live node (c) E-Node (d) State Node

Ans: Livenode

- 2. How many nodes are there in a full state space tree with n = 6?
- (a) 65 (b) 64 (c) 63 (d) 32

Ans: 63

- 3. This algorithm scans the list by swapping the entries whenever pair of adjacent keys are out of desired order.
- (a) Insertion sort. (b) Bubble sort. (c) Shell sort. (d) Quick sort.

Ans: Bubble sort.

- 5. From the following chose the one which belongs to the algorithm paradigm other than to which others from the following belongs to.
- (a) Minimum & Maximum problem. (b) Knapsack problem. (c) Selection problem.(d) Merge sort.

Ans: Knapsack problem.

- 6. To calculatec(i, j)'s, w(i, j)'s and r(i, j)'s; the OBST algorithm in worst case takes the following time.
- (a) $O(\log n)$ (b) O(n4) (c) O(n3) (d) $O(n \log n)$

Ans: O (n3)

- 7. What is the type of the algorithm used in solving the 4 Queens problem?
- (a) Greedy (b) Dynamic (c) Branch and Bound (d) Backtracking.

Ans: Backtracking.

- 8.In Knapsack problem, the best strategy to get the optimal solution, where Pi, Wi is the Profit, Weight associated with each of the Xi h object respectively is to
- (a) Arrange the values Pi/Wi in ascending order (b) Arrange the values Pi/Xi in ascending order
- (c) Arrange the values Pi/Wi in descending order (d) Arrange the values Pi/Xi in descending order

Ans: Arrange the values Pi/Xi in descending order

- 9. Greedy job scheduling with deadlines algorithms' complexity is defined as
- (a) O(N) (b) $\Omega(n \log n)$ (c) $O(n2 \log n)$ (d) $O(n \log n)$

Ans: O(N)

- 12 From the following choose the one which belongs to the algorithm paradigm other than to which others from the following belongs to.
- (a) Minimum & Maximum problem (b) Knapsack problem(c) Selection problem (d) Merge sort

Ans: Knapsack problem

- 14. Identify the name of the sorting in which time is not proportional to n2.
- (a) Selection sort (b) Bubble sort (c) Qucik sort (d) Insertion sort.

Ans: Insertion sort

- 15. The optimal solution to a problem is a combination of optimal solutions to its subproblems. This is known as
- (a) Principle of Duality (b) Principle of Feasibility (c) Principle of Optimality (d) Principle of Dynamicity.

Ans : Principle of Optimality

- 16. Which of the following versions of merge sort algorithm does uses space efficiently?
- (a) Contiguous version (b) Array version (c) Linked version (d) Structure version (e) Heap version.

Ans: Linked version

- 17. Identify the correct problem for multistage graph from the list given below.
- (a) Resource allocation problem (b) Traveling salesperson problem
- (c) Producer consumer problem (d) Barber's problem

Ans: Resource allocation problem

18. How many edges are there in a Hamiltonian cycle if the edge cost is 'c' and the cost of cycle is 'cn'

(a)c (b) cn (c)n (d) 2c

Ans :n.

- 19. A problem L is NP-complete iff L is NP-hard and
- (a) $L \approx NP$ (b) $L \propto NP$ (c) $L \approx NP$ (d) L = NP

Ans: LENP

- 20. What would be the cost value for any answering node of a sub tree with root 'r' using branch-bound algorithm?
- (a) Maximum (b) Minimum (c) Optimal (d) Average

Ans: Minimum

UNIT-III
1. From the following pick the one which does not belongs to the same paradigm to which
others belongs to.
(a) Minimum & Maximum problem (b) Knapsack problem (c) Salastian analysis (d) Management
(c) Selection problem (d) Merge sort
Ans:Knapsack problem
2. Primsalgorithm is based on method
a. Divide and conquer method c. Dynamic programming
b. Greedy method d. Branch and bound
Ans. Greedy Method
3. The amount of memory needs to run to completion is known as
a. Space complexity c. Worst case
b. Time complexity d. Best case
Ans: Space complexity
4. The amount of time needs to run to completion is known as
a. Space complexity c. Worst case
b. Time complexity d. Best case
Ans: Time complexity
5 is the minimum number of steps that can executed for the given parameters
a. Average case c. Worst case
b. Time complexity d. Best case
Ans: Best case
6 is the maximum number of steps that can executed for the given parameters
a. Average case c. Worst case
b. Time complexity d. Best case
Ans:Worst case
7 is the average number of steps that can executed for the given parameters
a. Average case c. Worst case
b. Time complexity d. Best case
Ans: Average Case
8. Testing of a program consists of 2 phases which areand
a. Average case & Worst case b. Time complexity & Space complexity
c. Validation and checking errors d. Debugging and profiling
Ans: Debugging and profiling
9. Worst case time complexity of binary search is
a. O(n) b. O(logn)c. Θ(nlogn) d. Θ(logn)
Ans: Θ(logn)
10. Best case time complexity of binary search is
a. O(n) c. Θ(nlogn)
b. O(logn) d. Θ (logn)
Ans: $\Theta(\log n)$
11. Average case time complexity of binary search is
a. O(n) c. Θ(nlogn)
b. O(logn) d. Θ (logn)
Ans: $\Theta(\log n)$

a. CARHOARE c. HAMILTON b. JOHN VON NEUMANN d. STRASSEN Ans: JOHN VON NEUMANN 13. Quick sort invented by a. CARHOARE c. HAMILTON b. JOHN VON NEUMANN d. STRASSEN Ans: CARHOARE 14. Worst case time complexity of Quick sort is a. Q(n2log7) c. O(nlogn) b. O(n2) d. O(logn) Ans: O(n2) b. O(n2) d. O(logn) Ans: O(n2) 15. Best case time complexity of Quick sort is a. Q(n2logn) c. a. Little on o. Little onlega	a. Little oh b. Little omega

```
b. Big oh d. Omega
Ans: Little oh
5. The function f(n) = o(g(n)) if and only if Limit g(n)/f(n) = 0 n - \infty
a. Little oh b. Little omega
b. Big oh d. Omega
Ans: Little omega
6. Thegeneralcriteria of algorithm; zero or more quantities are externally supplied is
a. Output b. Finiteness
b. Effectiveness d. Input
Ans: Input
7. The general criteria of algorithm; at least one quantity is produced _____
a. Output b. Finiteness
b. Effectiveness d. Input
Ans: Output
8. The general criteria of algorithm; Each instruction is clear and unambiguous _____
a. Output b. Definiteness
b. Effectiveness d. Input
Ans: Definiteness
9. The general criteria of algorithm; algorithm must terminates after a finite number
of steps _____
a. Output b. Finiteness
b. Effectiveness d. Input
Ans: Finiteness
10. Which is not a criteria of algorithm
a. Input b. Output
b. Time complexity d. Best case
Ans: Best case
11. Which is not in general criteria of algorithm
a. Input b. Output
b. Time complexity d. Effectiveness
Ans: Time complexity
12. Time complexity of given algorithm
Algorithm Display(A)
S:=0.0;
For i=0 to n-1
S:=S+A[i];
Return S;
a. 4n+4 c. 4n2+4
b. 2n2+2n+2 d. 4n+4
Ans: 4n+4
13. Time complexity of given algorithm
AlgorithmSum(A,S)
for i=1 to n-1
for j:=2 to n-1
```

{
S:=S+i+j;
return S;
}
)
)
a. 6n2-14n+4 c. 4n2+6n+12
b. 6n2+14n+10 d. 6n2-14n+10
Ans:6n2-14n+10
14. kruskal algorithm is based onmethod
a. Divide and conquer method b. Greedy methodc. Dynamic programming d. Branch and
bound
Ans. Greedy method
15. Prims algorithm is based on method
a. Divide and conquer method c. Dynamic programming
b. Greedy method d. Branch and bound
Ans. Greedy Method
16. The output of Kruskal and Prims algorithm is
a. Maximum spanning tree c. Spanning tree
b. Minimum spanning tree d. None of these
UNIT-V
1. job sequencing with deadline is based onmethod
a. greedy method c. branch and bound
b. dynamic programming d. divide and conquer
Ans. Greedy method
2. fractional knapsack is based onmethod
a. greedy method c. branch and bound
2 8 7 1 3 5 6 4b. dynamic programming d. divide and conquer
Ans. Greedy method
3. 0/1 knapsack is based onmethod
a. greedy method c. branch and bound
b. dynamic programming d. divide and conquer
Ans. Dynamic programming
4. The files x1,x2,x3 are 3 files of length 30,20,10 records each. What is the optimal
merge pattern value?
a. 110 c. 60
b. 90 d. 50
Ans. 90
5. The optimal merge pattern is based on method
a. Greedy method b. Dynamic programming
c. Knapsack method d. Branch and bound
Ans. Greedy method
6. Who invented the word Algorithm
a. Abu Ja'far Mohammed ibn Musa c. Abu Mohammed Khan
b. Abu Jafar Mohammed Kasim d. Abu Ja'far Mohammed Ali Khan
Ans. Abu Ja'far Mohammed ibn Musa
7. In Algorithm comments begin with
a. /* c. /
b. */ d. //
Ans: //

8. The	of an algorithm is the amount of memory it needs to run to	
completion.	·	
a. Space Complexity	c. Best Case	
b. Time Complexity		
Ans : Space Comple		
	be process of executing a correct program on data sets and	
	nd space it takes to compute the results.	
a. Debugging c. Com		
b. Profiling d. Conqu	•	
Ans: Profiling		
9	ecification the blockes are indicated with matching	
a. Braces c. Square B		
b. Parenthesis d. Slas		
Ans: Braces		
	re the applications of with minimal weighted external	
path length obtained	••	
a. BST b. MST	by an optimal set.	
c. Binary tree d. Wei	ahted Granh	
Ans: Binary tree	gnica Graph	
•	ng which is not return optimal solution	
	ming c. Backtracking	
b. Branch and bound		
	d. Greedy method	
Ans. Backtracking	on algorithm design method that can be used when the solution	
	an algorithm design method that can be used when the solution	
	viewed as the result of a sequence of decisions	
	ming c. Backtracking	
b. Branch and bound		
Ans: Dynamic prog		
	ack was first coined by	
a. D.H.Lehmer c. L.H		
b. R.J.Walker d. S. G	olomb	
Ans: D.H.Lehmer		
	refers to all state space search methods in which all hildren of the -	
	ted before any other live node can becomethe E-node.	
a. Backtacking c. De	•	
	d. Breadth First Search	
Ans; Branch and B		
	a round trip path along n edges of G that visits every vertex once	
and returns to its star	ting position.	
a. MST c. TSP		
b. Multistage Graph	d. Hamiltonian Cycle	
Ans: Hamiltonian C	Cycle	
17. Graph Coloring i	s which type of algorithm design strategy	
a. Backtacking c. Gre	eedy	
b. Branch and Bound	d. Dynamic programming	
Ans: Backtracking		
18. Which of the following is not a limitation of binary search algorithm?		
a. must use a sorted array		
b. requirement of sorted array is expensive when a lot of insertion and deletions		
are needed		

- c. there must be a mechanism to access middle element directly
- d. binary search algorithm is not efficient when the data elements are more than 1000.

Ans: binary search algorithm is not efficient when the data elements are more than 1000.

- 19. Binary Search Algorithm cannot be applied to
- a. Sorted linked list c. Sorted linear array
- b. Sorted binary tree d. Pointer array

Ans: Sorted linked list

- 20. Two main measures for the efficiency of an algorithm are
- a. Processor and memory c. Time and space
- b. Complexity and capacity d. Data and space

Ans: Time and Space

XII. GATE QUESTIONS:

1 The order of an internal node in a B+ tree index is the maximum number of children it can have. Suppose that a child pointer takes 6 bytes, the search field value takes 14 bytes, and the block size is 512 bytes. What is the order of the internal node?

A) 24 B) 25 C) 26 D) 27

Answer: (C)

2 The best data structure to check whether an arithmetic expression has balanced parentheses is a

A) queue B) stack C) tree D) list

Answer: (B)

3. A Priority-Queue is implemented as a Max-Heap. Initially, it has 5 elements. The level-order traversal of the heap is given below: 10, 8,5,3,2 Two new elements 1 and 7 are inserted in the heap in that order. The level-order traversal of the heap after the insertion of the elements is

A) 10,8,7,5,3,2,1 B) 10,8,7,2,3,1,5 C) 10,8,7,1,2,3,5 D) 10,8,7,3,2,1,5

Answer: (D)

4 The following numbers are inserted into an empty binary search tree in the given order: 10, 1, 3, 5, 15, 12, 16. What is the height of the binary search tree (the height is the maximum distance of a leaf node from the root)?

A) 2 B) 3 C) 4 D) 6

Answer: (B)

5 The goal of structured programming is to

A) have well indented programs B) be able to infer the flow of control from the compiled code C) be able to infer the flow of control from the program text D) avoid the use of GOTO statements

Answer: (C)

6 The tightest lower bound on the number of comparisons, in the worst ease, for comparison-based sorting is of the order of

A) n B) n 2 C) n log n D) n log 2 n

Answer: (B)

7 Let G be a simple graph with 20 vertices and 100 edges. The size of the minimum vertex cover of G is 8. Then, the size of the maximum independent set of G is

A) 12 B) 8 C) Less than 8 D) More than 12

Answer: (A)

8 Let A be a sequence of 8 distinct integers sorted in ascending order. How many distinct pairs of sequences, B and C are there such that (i) each is sorted in ascending order, (ii) B has 5 and C has 3 elements, and (iii) the result of merging B and C gives A?

A) 2 B) 30 C) 56 D) 256

Answer: (D)

9 A Priority-Queue is implemented as a Max-Heap. Initially, it has 5 elements. The level-order traversal of the heap is given below: 10, 8,5,3,2 Two new elements 1 and 7 are inserted in the heap in that order. The level-order traversal of the heap after the insertion of the elements is

A) 10,8,7,5,3,2,1 B) 10,8,7,2,3,1,5 C) 10,8,7,1,2,3,5 D) 10,8,7,3,2,1,5

Answer: (D)

10 The S-N curve for steel becomes asymptotic nearly at

A) 10³ cycles B) 10⁴ cycles C) 10⁶ cycles D) 10⁹ cycles

Answer: (C)

XIII. WEBSITES:

- http://www.ki.inf.tu-dresden.de/~hans/www-adr/alg_course.html --String Matching, Sorting, Linear Programming
- http://www.algorithmist.com/index.php/Main_Page-it contains dynamic programming, greedy, ,Graph Theory, sorting, Data Structures

http://www-2.cs.cmu.edu/~guyb/realworld.html- it contains Data Compression, Indexing and Search engines, linear Programming, Pattern matching

XIV. EXPERT DETAILS:

Professor Sartaj Kumar Sahni is an Indian computer scientist, now based in the USA, and is one of the pioneers in the field of data structures. He is a distinguished professor in the Department of Computer and Information Science and Engineering at the University of Florida.

http://www.cise.ufl.edu/~sahni/

XV. JOURNALS:

- 1. Journal of Graph Algorithms and Applications url:http://www.emis.de/journals/JGAA/home.html
- 2. Algorithmica –A journal about the design of algorithms in many applied and fundamental areas http://www.springerlink.com

XVI. LIST OF TOPICS FOR STUDENT SEMINARS:

- Randomized Algorithms, Binary search, Connected components and spanning Trees
- Hamiltonian cycles, Single source shortest path problem, Non-deterministic algorithms

XVII. CASE STUDIES / SMALL PROJECTS:

1. Techniques for Algorithm Design and Analysis: Case Study of a Greedy Algorithm.

Six different implementations of a greedy dominating set algorithm are presented and analyzed. The implementations and analysis illustrate many of the important techniques in the design and analysis of algorithms, as well as some interesting graph theory.

2. Scheduling Two Salesmen in a Network.

The two-server problem is concerned with the movement of two servers to request points in a metric space. We consider an offline version of the problem in a graph in which the requests may be served in any order. A family of approximations algorithms is developed for this NP-complete problem.
